

Construction Industry Council
Construction Workers Registration Board
Workers Registration Data Analysis

Glossary

- RSW = Registered Skilled Worker for a designated trade
 - RSS = Registered Semi-skilled Worker for a designated trade
 - RGW = Registered General Worker
 - DAR = Daily Attendance Record
 - $DAR > 0$ = those workers who appear at least once on a construction site according to the DAR over the period specified
 - $DAR = 0$ = those workers who did not appear on any construction site according to the DAR over the period specified
 - Average Working Days Per Week = the average working days per week for a worker, from the DAR or from the survey.
 - with card record = the number of working days that workers claimed to have used the registration card for work record in the previous week in the survey
 - without card record = the number of working days that workers did not use the registration card for work record in the previous week in the survey
 - DAR Snapshot = the number of workers on any day as captured in the DAR
 - For $DAR > 0$, the projected number of workers is based on the ratio of the average working days per week obtained from the phone survey to that of the DAR
 - For $DAR = 0$, the projected number of workers is based on the percentage of workers who claimed to be working in the industry from the phone survey
 - Equivalent construction work output = total levy collected over the period specified under the Construction Workers Registration Ordinance divided by 0.03%*
- * Under the Construction Workers Registration Ordinance, contractors are required to pay levy at the prescribed rate of 0.03% to the Construction Industry Council where construction operations are carried out with the prescribed total value equal to or exceeding HK\$1,000,000
