Promoting DfMA, MiC and Offsite Prefabrication

Construction Industry Council (CIC) strives to promote greater uptake of MiC and offsite construction-related techniques throughout the construction supply chain that involves clients, consultants, contractors and suppliers. It is important that the capabilities and the associated benefits of DfMA, MiC and offsite construction practices should be properly analysed, documented and shared within the local construction industry through CIC in organising a series of forums and technical seminars. This forum focus on how benefits of DfMA be enhanced through the use of advanced digital tools.
